

RAVE K-12 SOLUTIONS

One Platform for School Safety
Communications and Response

RAVE
MOBILE SAFETY

Schools face widening budget shortfalls while having to prepare against more threats and emergencies than ever before. With Rave, our lifesaving technology has proven to be a cost effective way to improve the safety of everyone in your school community through mobile panic buttons, mass notifications and early intervention technology. Our platform ensures your staff is able to efficiently communicate to prevent dangerous incidents and respond faster to emergencies.

- **69%** of **active shooter** incidents last between only **2 and 5 minutes**
- **80%** of teachers have had one or more **victimization experience** in the last 12 months
- **6 out of 10 teenagers** say they see **bullying** happen at school at least once a day

INCREASE SCHOOL SAFETY

EARLY INTERVENTION AND RESPONSE

IMPLEMENT HIGH TECH SOLUTIONS AT A LOW COST

EXPEDITE EMERGENCY RESPONSE

DIRECT INTEGRATION WITH 9-1-1

INCREASE PARENT ENGAGEMENT

EARLY INTERVENTION AND PREVENTION

Growing student to teacher ratios with limited staff support spreads faculty and staff thin when it comes to realizing and preventing dangerous incidents. Meanwhile, students are acutely aware of changes in their surroundings and suspicious behaviors and bad actors. When students don't want to snitch on their peers, dangerous situations can escalate when those in charge aren't aware.

With a text-a-tip technology for crowdsourced student reporting, staff can encourage student reporting of students acting differently, rumors of access to weapons, incidents of bullying or dangerous threats via discreet text messaging. Key personnel can respond to any texts submitted in real-time to collect additional information and details. Each report is logged for future viewing and reviewing trends and incident patterns over time.

ONLY SOLUTION FULLY INTEGRATED WITH 9-1-1 & FIRST RESPONDERS

There are a tragic number of school shootings across the country. If there's a delay in notifying 9-1-1, it can slow down first responders and on-site staff resolving any incident and putting everyone at the school at risk.

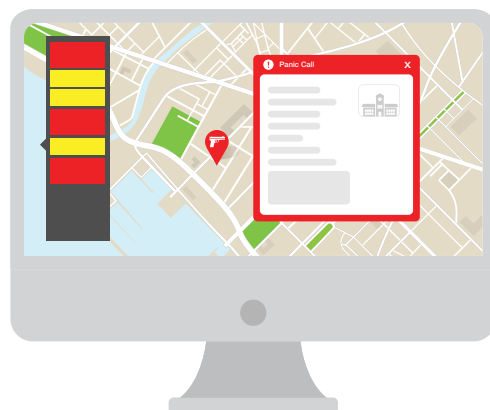

By instantly communicating with 9-1-1, 9-1-1 serves as incident command and can dispatch proper resources to respond to the scene and initiate real-time communication with school administrators and on-staff. When 9-1-1 receives the panic call, the call taker immediately sees the type of emergency, location of incident, and has direct access to floor plans, access points, and other key facility data. Additionally, the call taker can start messaging all mobile panic button users to relay key details and instructions as the incident unfolds. This direct integration with 9-1-1 results in the fastest and best coordinated response to any school emergency.

COMMUNICATE MORE EFFECTIVELY

In today's world, the need to keep parents, staff and students informed is greater than ever. With a parent engagement and notification tool, school administrators can easily communicate more effectively using their recipients' preferred communication methods. From automated attendance notifications and low lunch balance alerts to unexpected school closures and school emergencies, parents and staff can feel confident they can count on your school to deliver the emergency and general notifications they need to keep students safe and parents informed.

COORDINATE IMMEDIATE ON-SITE RESPONSE

With little time available for law enforcement to respond, it is critical to reduce the reaction time of staff on-site and enhance the communication with first responders.

A mobile panic button now enables faculty and staff on-site to instantly communicate the mobile panic button activation to 9-1-1 and on-site personnel. Key personnel and staff on the scene are immediately notified through mobile technology and can act immediately.

In Blytheville, Arkansas, a teacher activated the mobile panic button when a gun was seen in a student's backpack. In less than a minute, the School Resources officer responded to the scene and safely removed the weapon. Examples like this showcase how a mobile panic button helps coordinate a faster response by on-site personnel and responding officers through response, rapid evacuation or lockdown.

SPEED UP EMERGENCY RESPONSE

While school shootings are in the news and a growing national problem, schools also have to prepare for the day-to-day emergencies that impact school safety and put school children at risk.

By partnering with local first responders, schools can instantly provide first responders the incident type, location, facility details and other key information automatically to speed up the emergency response by first responders.

In Seminole County, Florida, Captain Richard Francis from the Seminole County Sheriff's Office states, "the time saved by Rave is 'priceless.' With a mobile panic button, responders have more information before they arrive at the scene and it improves their response time, situational awareness, and could save a life."

EASILY INTEGRATE INTO YOUR SYSTEMS

The Rave platform can seamlessly interface with your existing systems. Whether you need to integrate the parent notification system with your student information system or the mobile panic button with video surveillance, radios and access control, the Rave platform can trigger a series of technologies designed to improve communication, response and safety.

“The Rave platform has been an extraordinary resource and an integral, deeply vested part of our school safety plan.”
