# Rave 911 Suite™
Improved Location Data

NOW INCLUDES RAPIDSOS

Rave 911 Suite location data comes from a variety of sources. It provides improved, more accurate location information and speeds response. It supports and refines Mobile ALI locations in a single view.

When a 9-1-1 call comes into a PSAP, the Rave 911 Suite presents PSAP call takers with a consolidated map-based view of call location data from multiple sources. This combined view allows call takers to instantly hone in on the caller's location.

Location Data Sources

MOBILE ALI
Your primary source of location data today – typically accurate to within 50-300 meters.

SMART911® PROFILE
Accurate inferred location – work and home location address provided by individuals in Smart911 profiles.

RAVE FACILITY™
Identify key facilities in the vicinity of the caller, providing access to civic address, floor plans, entry/exits, emergency contacts, and more.

RAPIDSOS CLEARINGHOUSE
Directly from smartphones – uses best available technology (GPS, WiFi, beacons) to provide highly accurate location.
