

RAVE CORONAVIRUS SOLUTION

Response to Recovery

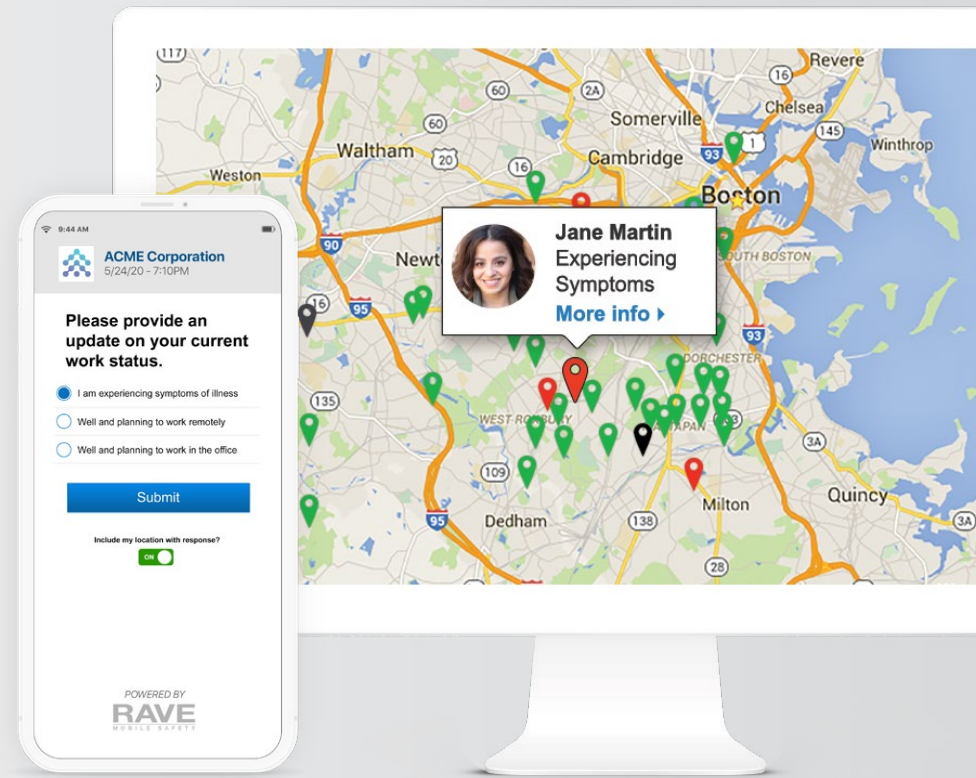

Conducting wellness checks and rapidly sharing critical information with employees will help bring your corporation back to work safely.

As we begin to recover from this pandemic and continue marching towards the “new normal”, there are a myriad of technologies that may be able to help. However, it’s not about boiling the ocean. You need to find a scalable solution that is easy to use, reliable, and quick to deploy.

At Rave, we surface **critical data, monitor the health of employees**, and allow you to **connect all parts of your business with targeted communications**. We are a proven solution that has been trusted by decision makers across executive teams and human resources for over a dozen years as they prepare, respond and recover from any business disruptions or health and safety threats.

Monitoring the Status of Your Workforce

Complement contact tracing, social distancing, and other reopening activities with cost-effective, easy-to-use solutions. Protect the safety of your employees as operations come back up and running with the right tools to keep them informed and comfortable.

RECOVERY COORDINATION.

Utilize one-click conferencing to gather key stakeholders across your organization and collaborate with the response team on strategic decisions. Provide access to critical information, fill shifts to ensure no staff shortages, and send in anonymous tips.

EMPLOYEE SUPPORT.

Facilitate rapid isolation for individuals who have tested positive or are at-risk, and offer available community resources for those in need. Provide a channel to update stakeholders on accessibility to medical care, food, childcare and other needs through easy-to-consume notification capabilities.

REDUCE LIABILITY.

Send direct messages to all staff, specific groups, offices and locations, and/or remote workers via text, email or voice. Leverage technology to collect data, monitor employee health status, and share custom content such as health and financial resources, social distancing protocols, office openings/closures, and shift changes.

RESTORE OPERATIONS.

Conduct automated wellness checks on employees to ensure they are symptom-free before arriving to work. Bringing employees back to work safely and in good health will restore operations and supply chains.

Creating and Executing a Path to Mitigation

Targeting daily communications with employees, assigning clear responsibility for next steps, and collaborating with government agencies, public health and safety agencies, and first responders will be key as we work to reopen effectively.

Help your employees feel heard and safe:

- ✓ **Gauge concerns around returning to the office or working from home**
- ✓ **Be transparent with consistent communication**
- ✓ **Provide safeguards in the workplace to mitigate future incidents, such as new outbreaks, weather, or distraught workers**
- ✓ **Implement a way to provide feedback**
- ✓ **Check in as the situation progresses**

ORGANIZATIONAL HEALTH.

Ensure the right technologies are in place to collect and assess data around the health of your organization. Update and communicate new and changing policies around in-office shifts or divided groups/teams to reduce the risks of reopening.

IMPROVED RESPONSE.

Provide the ability for employees to report on working conditions and self-report symptoms or violations, such as confidential tips of health or safety violations.. Offer additional services, monitor isolation activities, and measure outcomes as the new normal continues to evolve.

EMPLOYEE SAFETY.

Drive targeted, actionable, efficient communications and encourage employees to better protect themselves and your organization. Make sure everyone is staying safe and smart in, and out, of the office by providing updates on challenges and clarity around new protocols and processes involving good hygiene and social distancing.

Why Rave?

- ✓ Proven and Reliable
- ✓ Easy to Use
- ✓ Fast to Deploy
- ✓ Quick Time to Value
- ✓ Reduced Risk Liability

Rave Mobile Safety supports your fight against coronavirus from response to recovery. We provide critical technologies and data that can help coordinate and communicate your action plan across your organization. Keep your company safe and motivated as you take key steps to reopen with our **Back-to-Work Planning Checklist**.

RAVE
MOBILE SAFETY

Back-to-Work Planning Checklist

Phase One

- Start with your employees.
- Prepare the physical workplace.
- Revise employee handbooks.
- Order needed supplies.
- Think of all possible safety scenarios.
- Communicate new policies, schedules, or details.

Phase Two

- Evaluate when to ease restrictions.
- Segment communications.
- Allow temporary staff or visitors to opt into communications.
- Provide anonymous tip line.
- Plan for remote worker needs.
- Check in on employees.

Phase Three

- Clean up distribution lists.
- Keep a positive culture.
- Reevaluate communication process.
