

Connect and Protect Your Healthcare Staff

Employee Safety App to Connect with Employees Wherever They Are

With **Rave Guardian**, healthcare organizations can engage directly with employees through a safety mobile app to provide resources, emergency assistance and two-way communications.

- **Protect traveling workers with safety timers and employee wellness checks**
- **Drive more engagement from your employees with geo-targeted notifications and two-way texting**
- **Solicit more need-to-know information through discreet and anonymous employee-submitted tips**

SAFETY TIMER

Employees never travel alone. The Safety Timer enhances your security program as a virtual escort and adds an extra layer of safety for traveling workers.

EMERGENCY CALL BUTTON

Help is on the way. With a push of a button, employees can directly connect to 9-1-1 or security in an emergency.

ROUTED CHATS BY DEPARTMENT

Prevent dangerous situations with two-way discreet and anonymous chats. With employee-initiated texting, they can contact any department and you will see an increase in reported incidents.

GEO-TARGETED PUSH NOTIFICATIONS

Increase precision with geo-targeted push notifications. Target traveling employees by their real-time locations, even when they don't have cell signals.

CONTENT PORTAL

Emergency procedures, shuttle schedules and other key documents can be shared with employees in a configurable content library.

CALL DIRECTORY

Enable employees to easily find assistance and resources with an organization call directory of important numbers.

PROTECT TRAVELING WORKERS

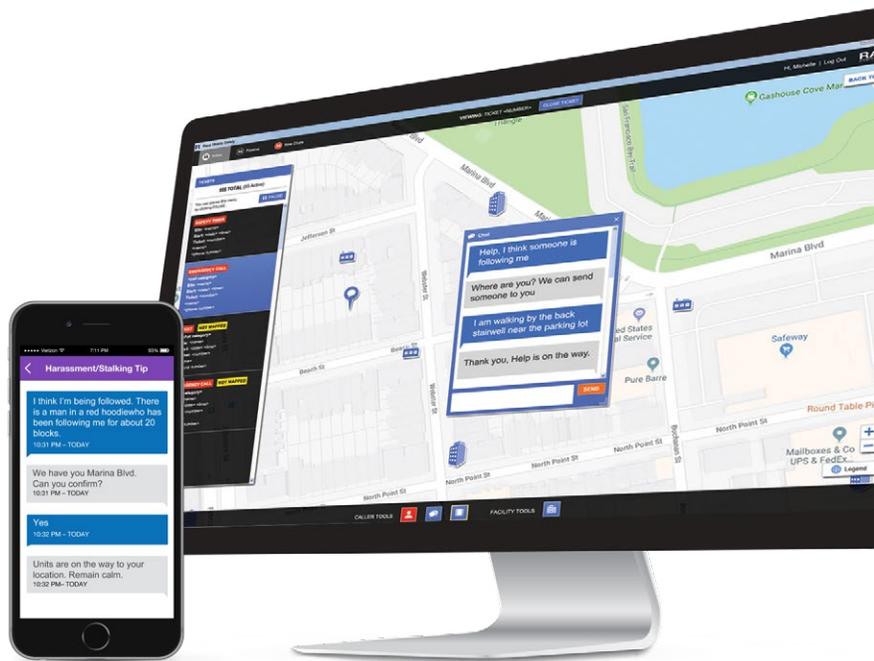

The number of visiting nurses, in-home caregivers, personal care aides and other traveling employees—whether they are visiting another campus or going off-site — is drastically increasing. As the workforce becomes more mobile, employees need to be informed and safe, no matter where they might be.

With Rave Guardian™, you can send geo-targeted notifications and check-ins to employees, giving security and key personnel greater insight to immediately respond and send help. Rave Guardian serves as one portal for employees to set the Safety Timer to have security monitor their travels. Employees can also access emergency resources and plans, and key contacts to call with the click of a button.

As incidents unfold, your team has Rave Guardian's incident management dashboard for real-time monitoring and communications, and employees have two-way communications and resources to get the help they need.

DRIVE EMPLOYEE ENGAGEMENT AND RESPONSE

Despite being the eyes and ears of your organization, your staff might be hesitant to report incidents or personnel issues. Employees can engage directly with designated departments, such as security, facilities or human resources, through discreet chats via Rave Guardian. The anonymous tip technology increases engagement from your staff and encourages them to share timely, critical information that will help your organization run smoother.

INCIDENT MANAGEMENT TOOLS AND REPORTING

With the incident management dashboard, your organization can view Rave Guardian Safety Timer sessions, tip submissions, text messages, emergency calls and user locations, and can immediately respond.

Rave Guardian reports provide detailed real-time and historical reporting with key metrics and graphs showing tips, event types over time, and audit trails.

Security can gain insight into areas with repeated activity and develop proactive programs. Reports also establish a record that can be useful in incident management and after-action procedures.

“During times of crisis, patients, employees and the larger community expect hospitals to maintain operations without any interruption. By using the Rave platform, our emergency communications process operates smoothly, quickly and with minimal intervention. Maintaining a common operating picture, especially with geographically separate facilities, is critical during events.”
