

Rave Panic Button™ with Status Checks

Taking Incident Management
from Identification
to Resolution

When the Rave Panic Button is pushed, a workflow of communication begins – from the initial seconds of an emergency through resolution. We are providing complete control over incident management and empowering those impacted to be actively involved in ensuring the safety of themselves and those around them.

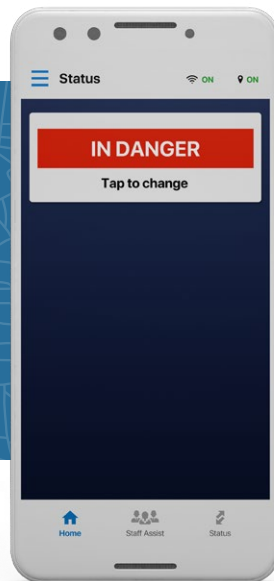

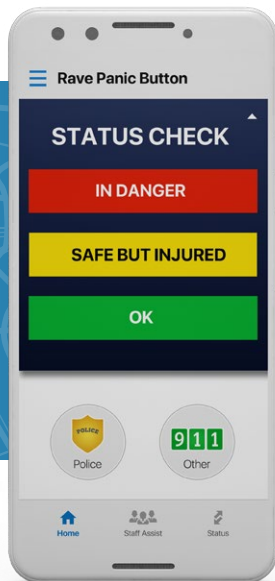

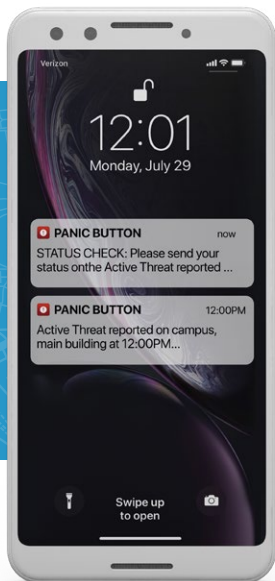

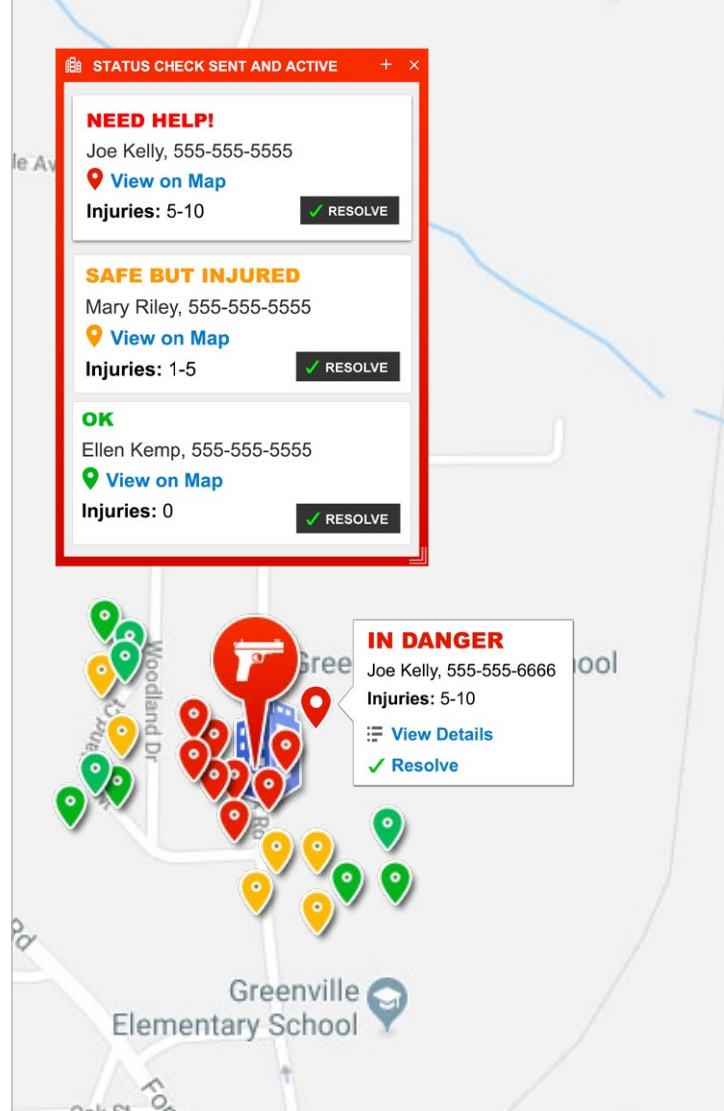

Rave is the only panic button backed by a public safety grade infrastructure that you can depend on to work every single time. Instant notifications will be delivered to all critical parties, including employees, public safety and 9-1-1. With the click of a button, Rave's platform starts the crisis response process and will improve response times when every second counts.

The embedded **Status Checks** feature provides continued engagement throughout an event with a clear polling feature that displays an easy-to-see visual representation of those impacted. End users are able to easily update their status and provide first responders with the clarity they need – increasing efficiency by quickly identifying the most urgent need for resources.

Help is not only arriving sooner, but to the right places – helping you mitigate the risk and gain more control over a situation until it is neutralized.

The Enhanced Panic Button Provides:

- ✓ Faster, simpler and more effective response from initial alerting through resolution
- ✓ Continued engagement throughout the course of an emergency
- ✓ Full understanding of the status and location of those involved
- ✓ Guidance around where the most urgent need for help is
- ✓ Empowerment of users to help in a time of crisis

Deploy in a matter of hours to keep your communities safer.
